
Temperature estimators: absolute temperature and differences
Temperature [°C]
Initial WLS
Joint WLS
A100/C300 ratio
Room: 23 °C
Iteration
Temperature [°C] — expanded scale
Joint WLS
A100/C300 ratio
Iteration
Joint − ratio [°C]
Iteration
Iteration number; timestamps are unavailable. The 23 °C room reading is not a direct crystal-temperature measurement.

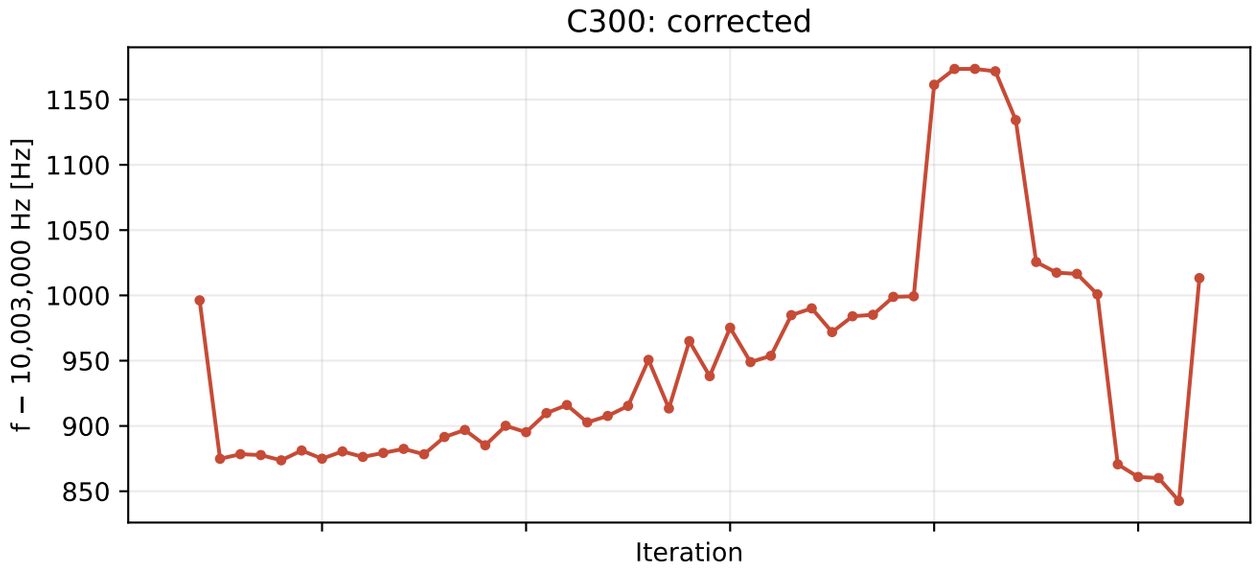

Reference baseband, estimated clock and common component

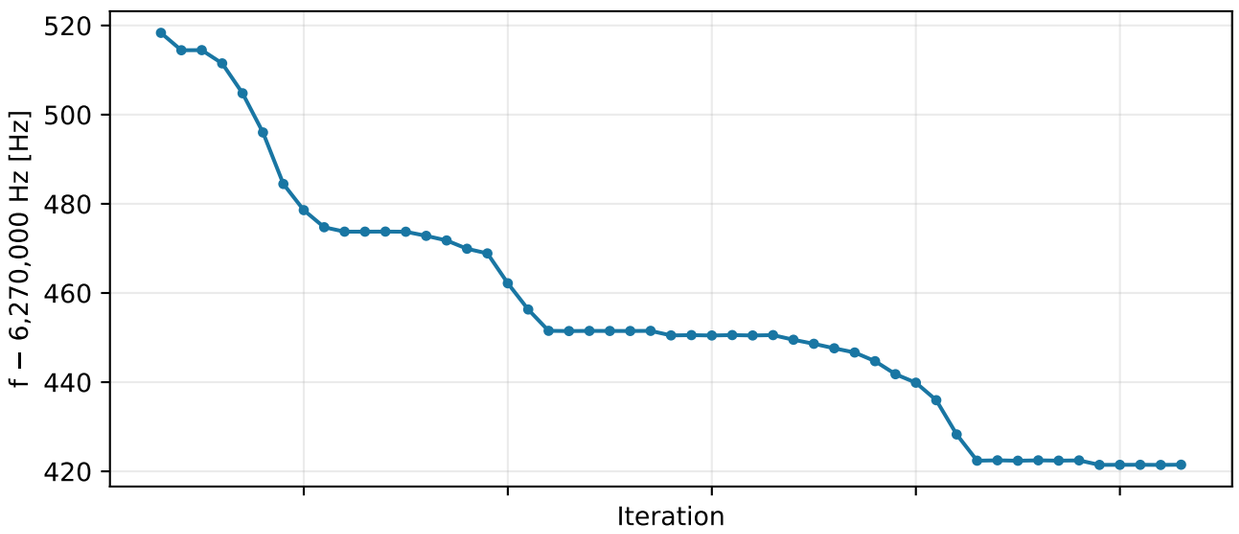

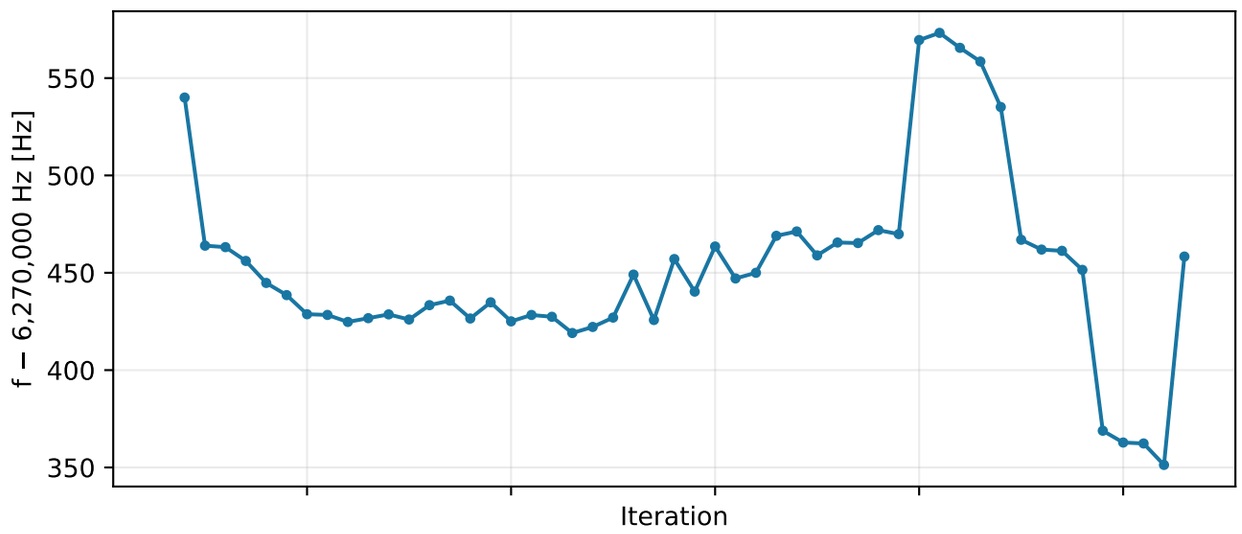

Iteration number; timestamps are unavailable. The 23 °C room reading is not a direct crystal-temperature measurement.

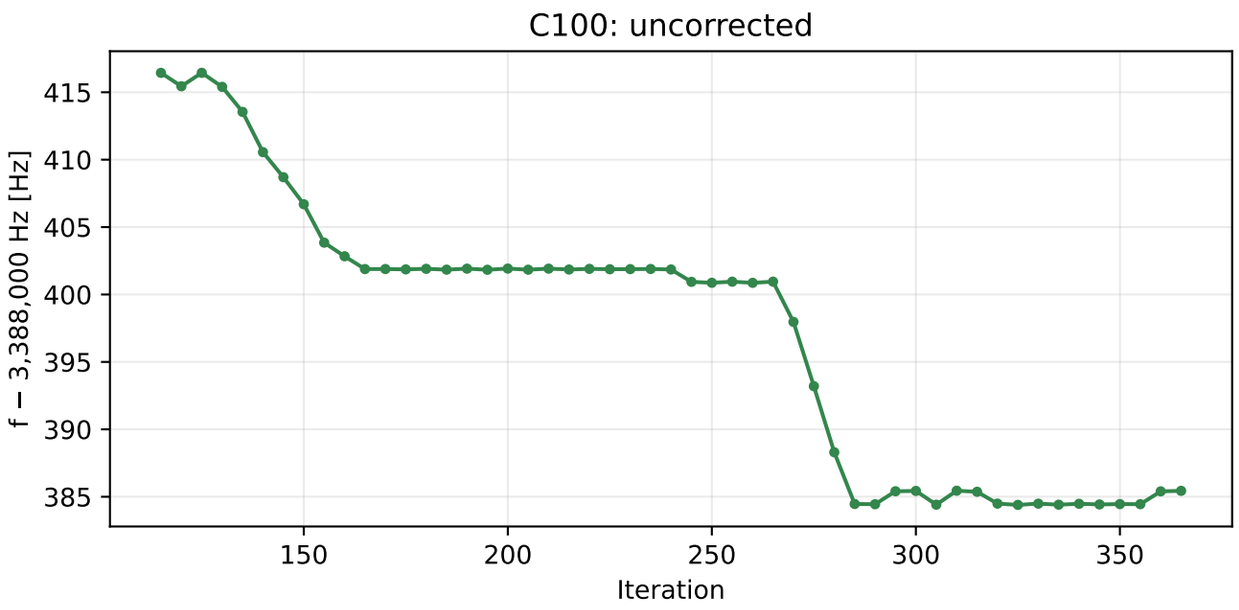

Modal frequencies: uncorrected and corrected

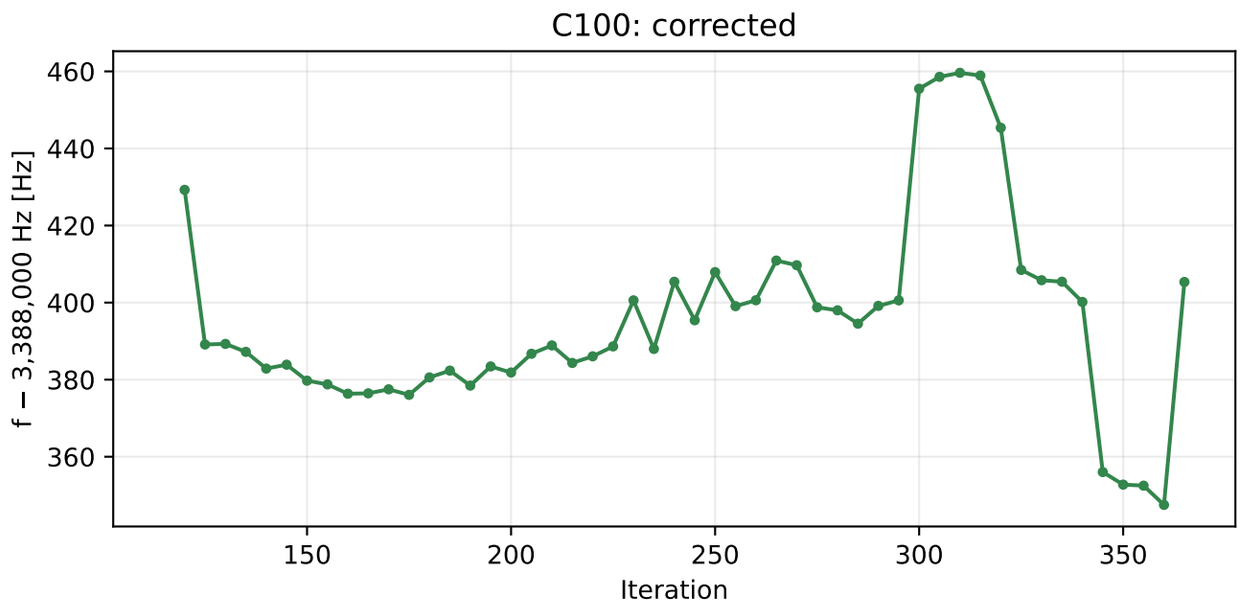

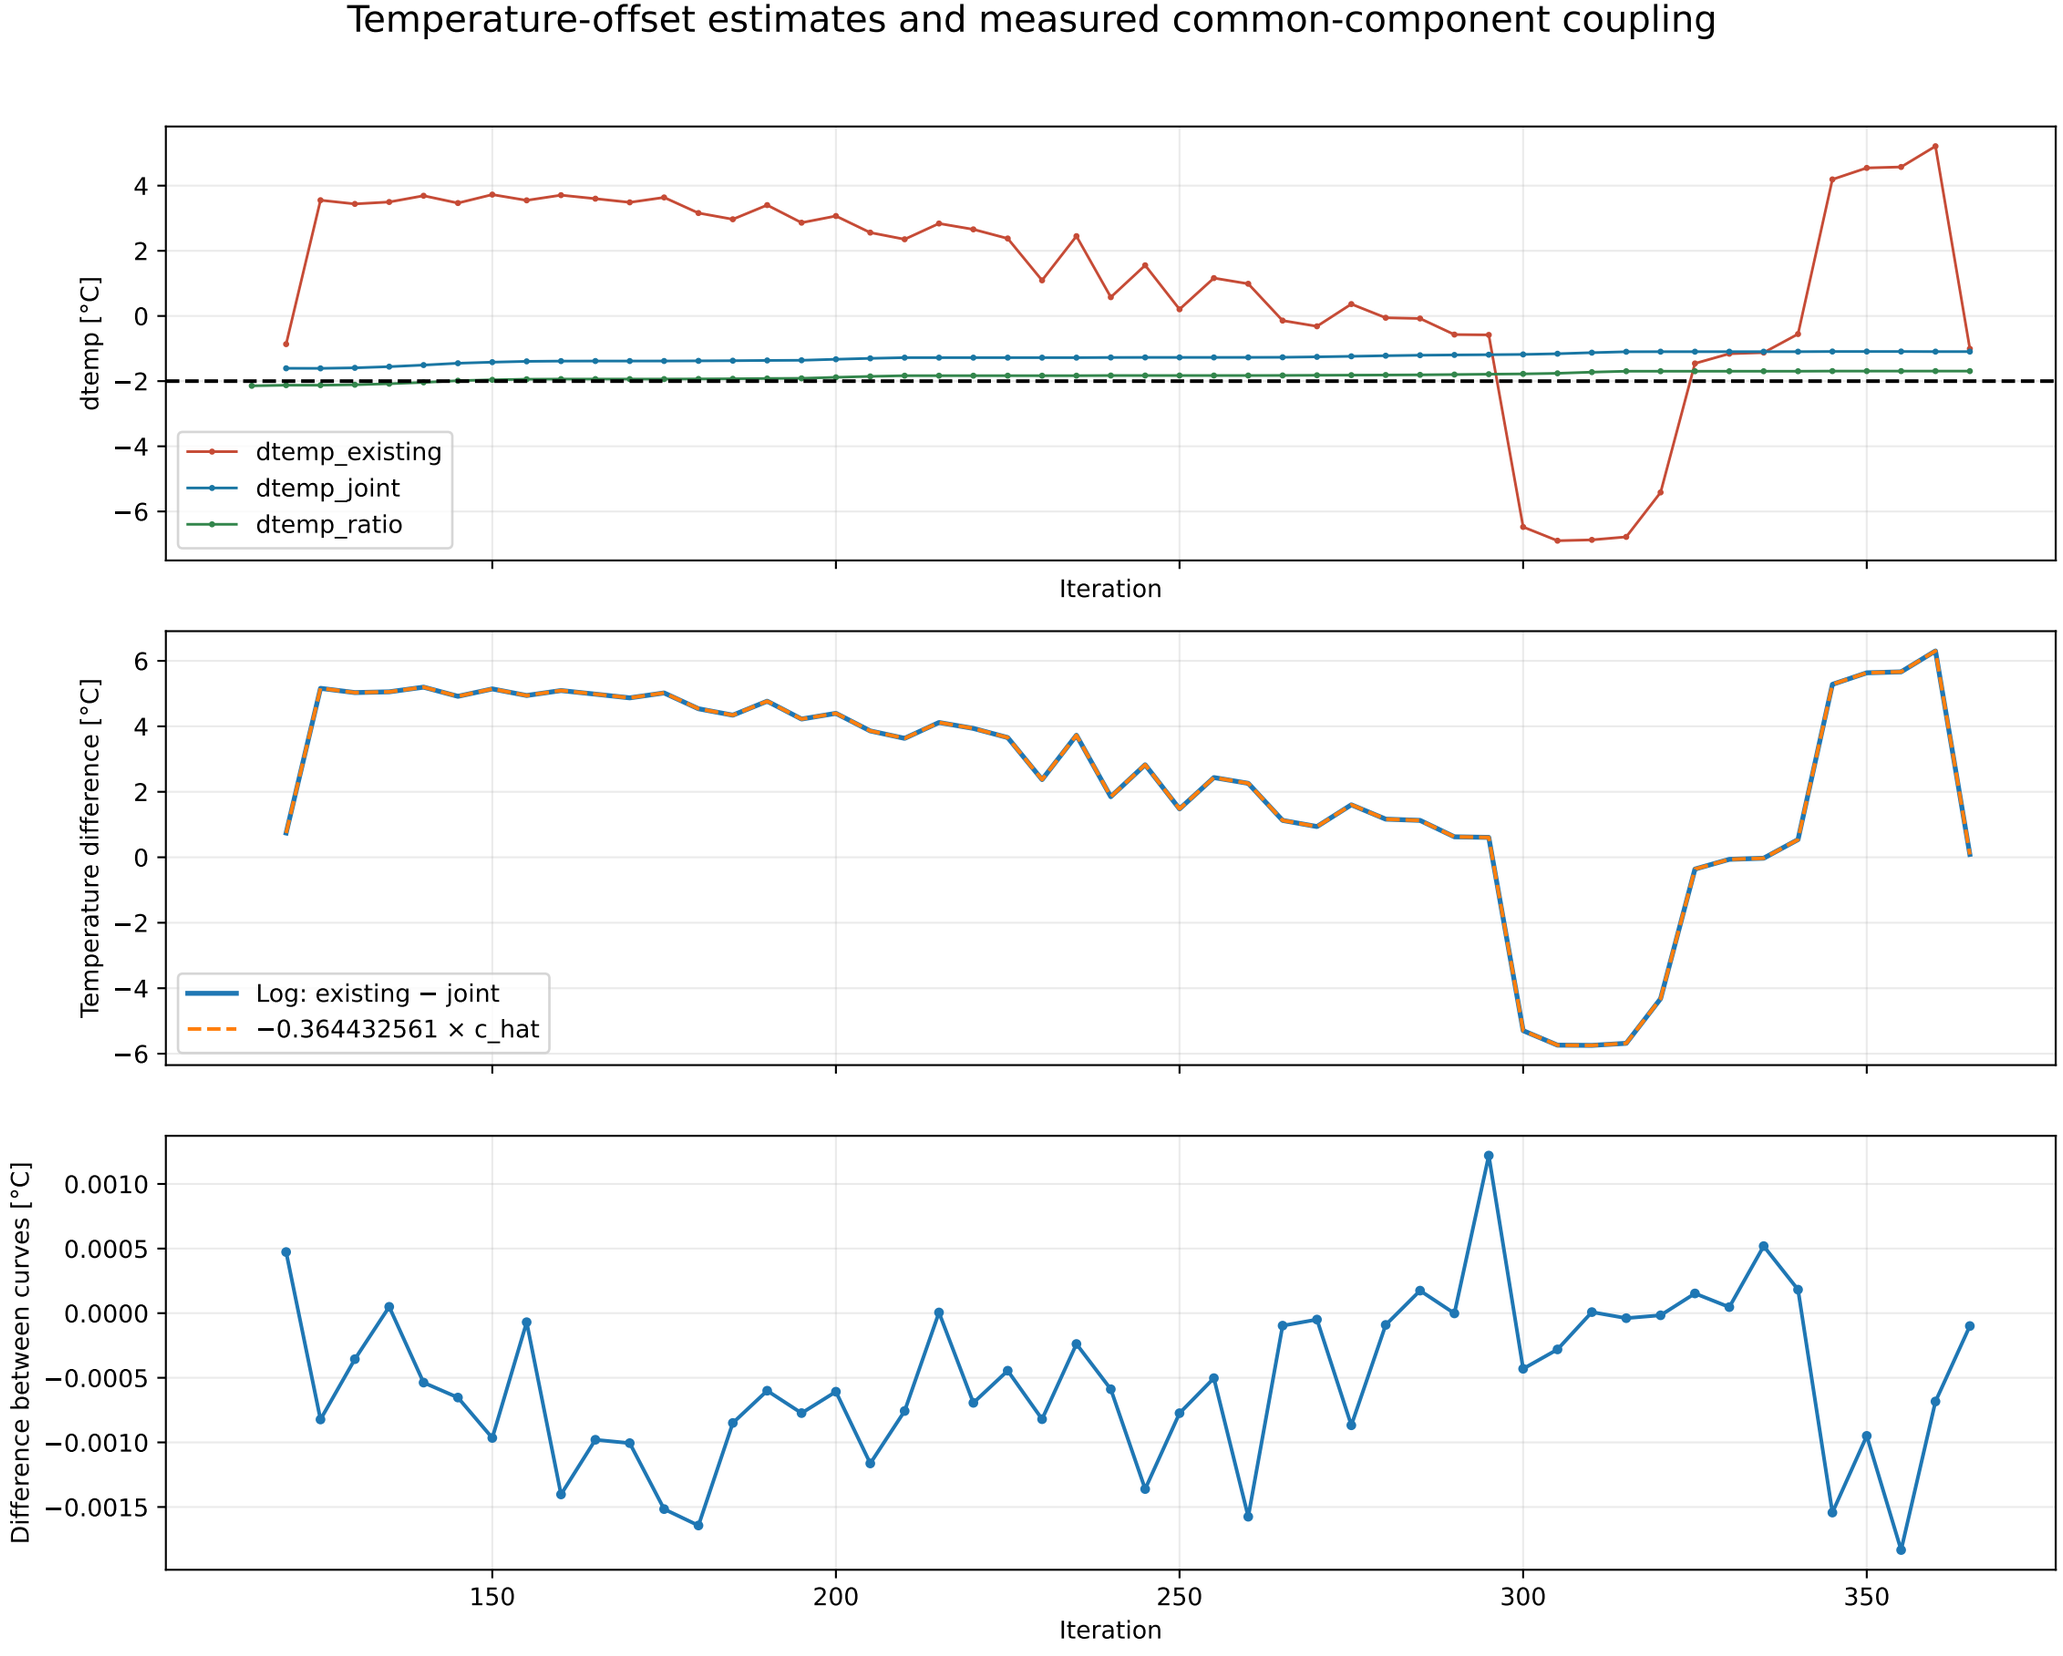

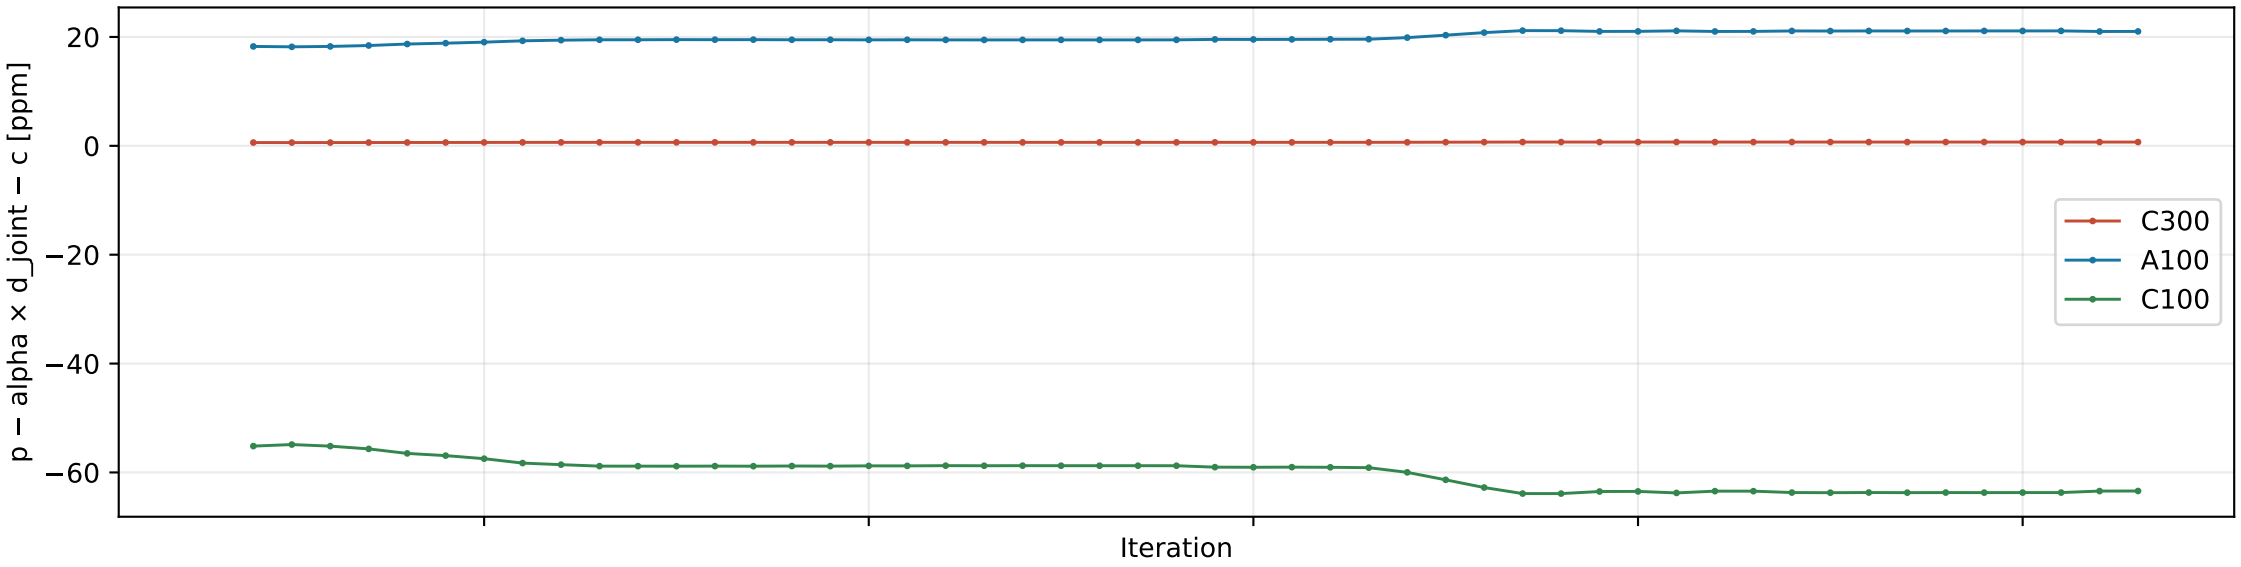

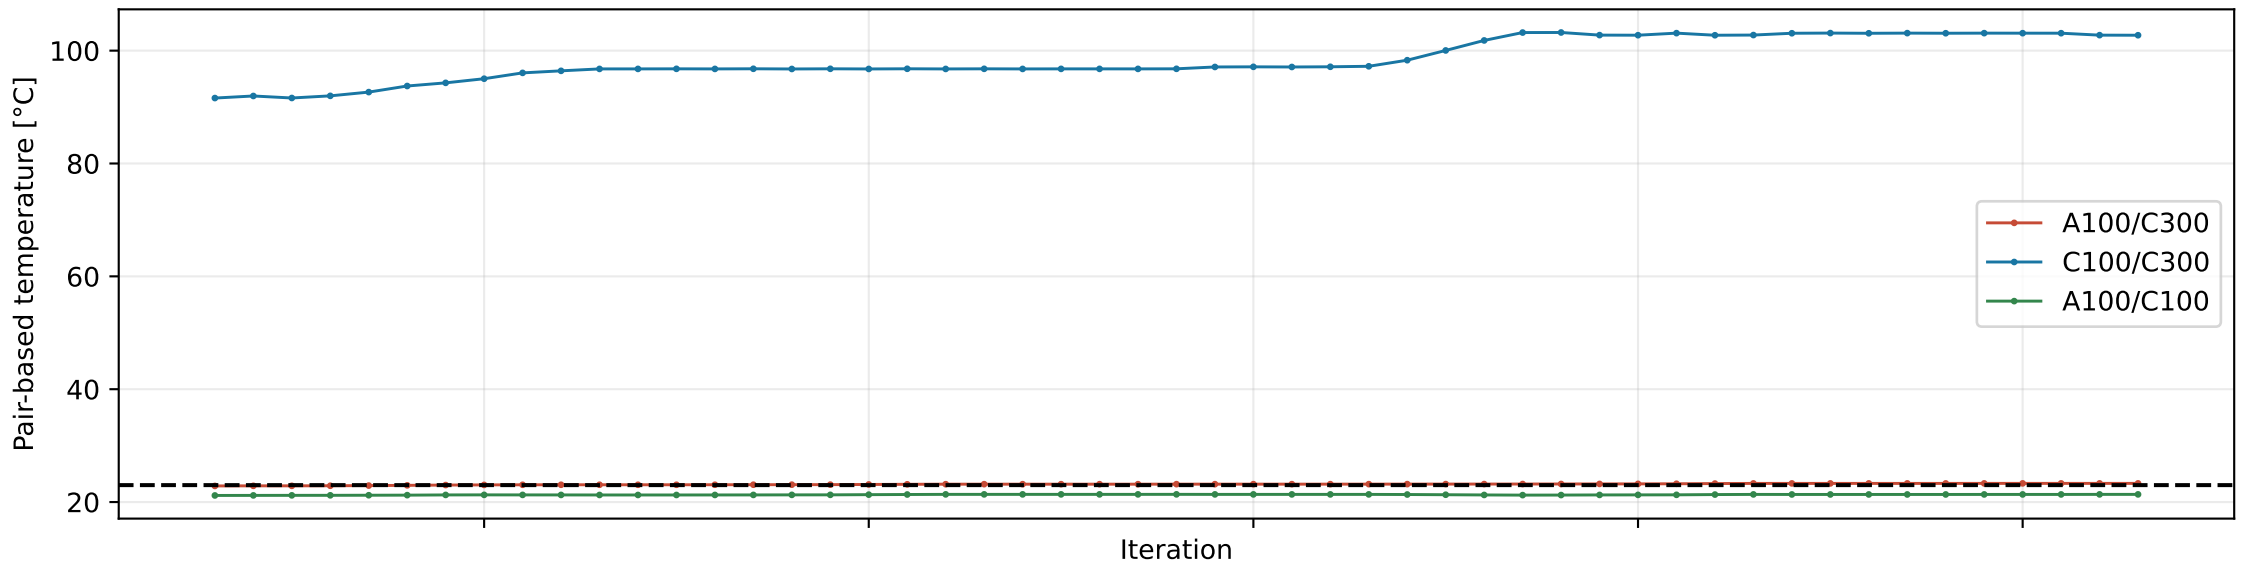

Iteration number; timestamps are unavailable. The 23 °C room reading is not a direct crystal-temperature measurement.

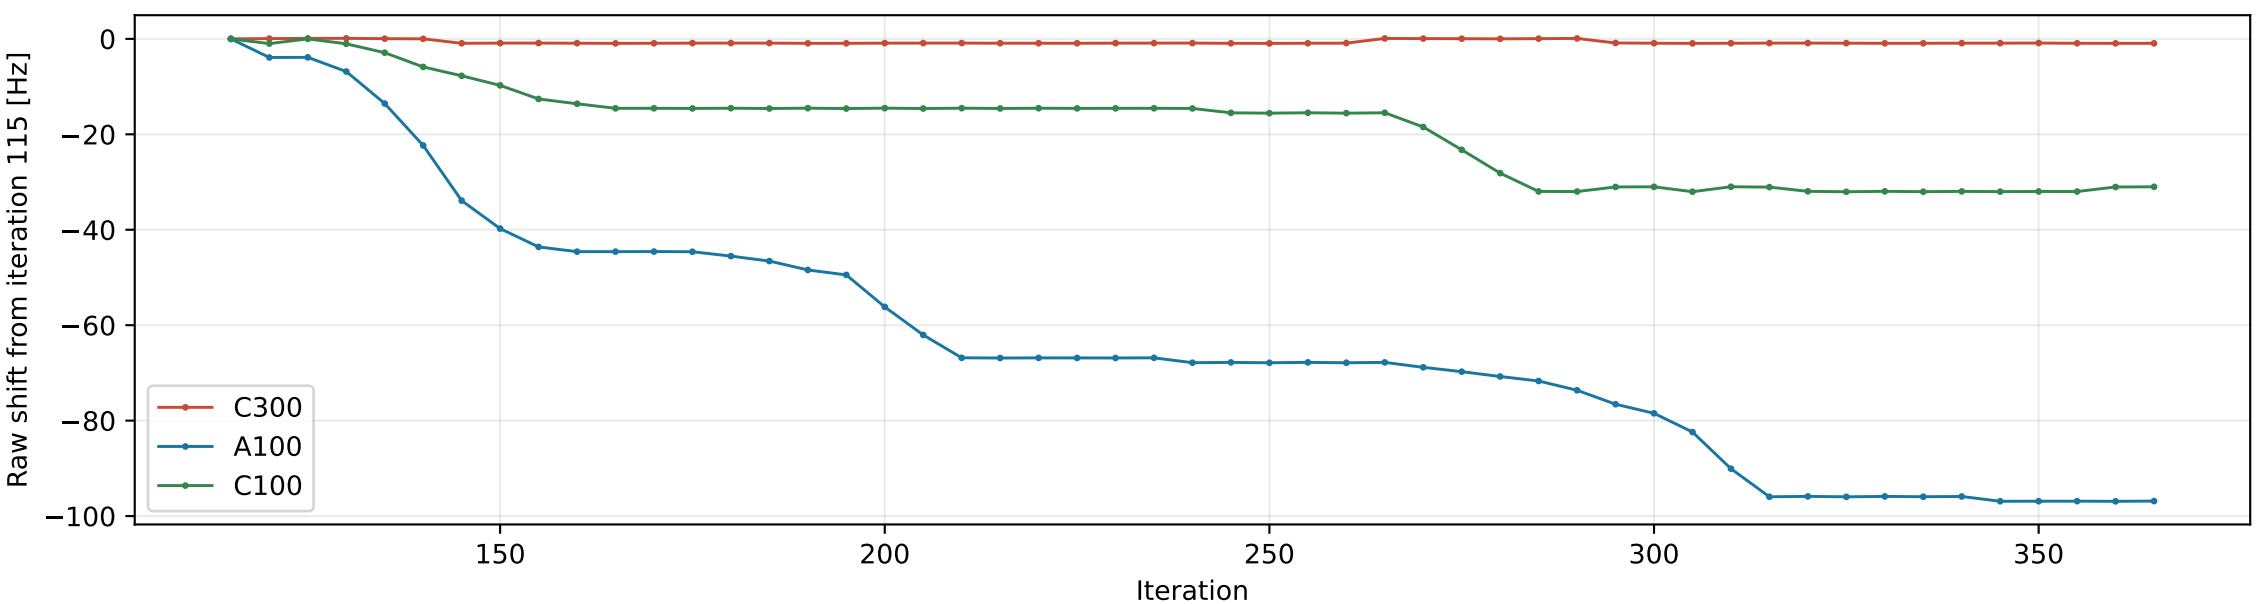

Temperature-offset estimates and measured common-component coupling
dtemp [°C]
dtemp_existing
dtemp_joint
dtemp_ratio
Iteration
Temperature difference [°C]
Log: existing − joint
−0.364432561 × c_hat
Difference between curves [°C]
Iteration
Iteration number; timestamps are unavailable. The 23 °C room reading is not a direct crystal-temperature measurement.

Consistency of modal measurements with the temperature model

Additional mode pairs computed offline; C100/C300 has low temperature sensitivity

Iteration number; timestamps are unavailable. The 23 °C room reading is not a direct crystal-temperature measurement.
